Immunology is one of the fastest growing subjects, it has been widely permeated in various fields of basic medicine and clinical medicine, and formed many branches and interdisciplines. Veterinary immunology is one of the important

branches of Immunology. Its study focuses on organization structure and biological function of animal immune organs, immune cells and immune molecules and has strong theoretical and applied discipline. This subject is a specialized direction courses for veterinary medicine and a basic optional courses for animal science, biology technology, biotechnology and biological sciences. The students should grasp and understand the basic theory, basic knowledge and basic skills of this subject and understand the development trends and research hot spots of the subject through learning of this course.

The application and significance of the basic theory of Immunology in veterinary medicine and life science also should be emphasized. The knowledge got from this course can lay the foundation for students to study the following related courses and to engage in immunological related works.
